- **Cleaning & Disinfection of Cooling Towers & Condensers**
- **Cleaning & Disinfection of industrial Reservoir and Silo Systems**
- **On-Line disinfections of Domestic and Cooling water systems**
- **Inspection & Flushing of Calorifiers**
- **Clean & Descale of Shower Heads**
- **Chemical descale of Domestic & Cooling water systems**

In order to control the legionella risk and maintain water hygiene, domestic and cooling water systems including storage tanks, calorifiers, towers and condensers should be inspected regularly and, if necessary, physically cleaned and then disinfected. Disinfection and physical cleaning of domestic water, food processing and evaporative cooling systems is essential if water hygiene is to be maintained and the risk of Legionnaires Disease is to be controlled.

Our technicians are well trained in all aspects of H&S, working at heights, manual handling, MEWP operation and observe the rigorous safety precautions needed for working in confined spaces, including trained operatives in emergency evac procedures. Each of our technicians is a qualified First Aider. With our experience working in such a diverse array of industries and environments, we are both capable and flexible enough to work under site or local management rules and instructions and have access to all necessary and required equipment to carry out same.

We offer a comprehensive range of cleaning and disinfection services, using specialist disinfectants including chlorine, chlorine dioxide and hydrogen peroxide.

Our tank and cooling tower cleaning service guarantees that your plant and equipment are operating within the appropriate laws, guidance and legislation. Cleaning and disinfection procedures are in full compliance with L8 ACoP and Guidance Legionnaires Disease; The control of Legionella bacteria in water systems, BS 8558:2011, EC Directive 80/778/EEC; and HPSC National guidelines for the control of legionellosis in Ireland 2009. A compliance certificate is issued on completion of all works.
